H5G_REFRESH

Refreshes all buffers associated with a group

Procedure:

H5G_REFRESH(group_id)

Signature:

```
herr_t H5Grefresh(hid_t group_id)
```

Parameters:

<i>hid_t</i> group_id	IN: Identifier of the group to be refreshed
-----------------------	---

Description:

H5G_REFRESH causes all buffers associated with a group to be cleared and immediately re-loaded with updated contents from disk.

This function essentially closes the group, evicts all metadata associated with it from the cache, and then re-opens the group. The reopened group is automatically re-registered with the same identifier.

Returns:

Returns a non-negative value if successful; otherwise returns a negative value.

Example:

Coming soon!

History:

Release	Change
1.10.0	C function introduced with this release.
