

Group Creation Properties

- `H5P_GET_EST_LINK_INFO` — Queries data to estimate required local heap or object header size
- `H5P_GET_LINK_CREATION_ORDER` — Queries whether link creation order is tracked and/or indexed in a group
- `H5P_GET_LINK_PHASE_CHANGE` — Queries the settings for conversion between compact and dense groups
- `H5P_GET_LOCAL_HEAP_SIZE_HINT` — Retrieves the anticipated size of the local heap for original-style groups
- `H5P_SET_EST_LINK_INFO` — Sets estimated number of links and length of link names in a group
- `H5P_SET_LINK_CREATION_ORDER` — Sets creation order tracking and indexing for links in a group
- `H5P_SET_LINK_PHASE_CHANGE` — Sets the parameters for conversion between compact and dense groups
- `H5P_SET_LOCAL_HEAP_SIZE_HINT` — Specifies the anticipated maximum size of a local heap
